AVIONICS DESCRIPTION:

The Honeywell PRIMUS 1000 Integrated Avionics System is a fail-passive autopilot/flight director and display system with horizontal and vertical flight guidance modes. These include all radio guidance modes, long range navigation system tracking modes, and air data vertical modes. Either flight director can be coupled to the autopilot. The integrated avionics computer (IAC) flight guidance function digitally processes attitude, heading, navigation, and air data information to satisfy the pilot's requirements. The data is presented to each pilot on the electronic flight instrument system (EFIS) displays.
